## PRESS RELEASE

Kirchdorf, 09.12.2025

### Diesel Technics Annual Review 2025

Growth, quality and customer focus worldwide

A year full of milestones: With new buildings, anniversaries and a global presence, Diesel Technic 2025 has further strengthened its international market position. Investments in modern infrastructure, digital quality assurance and direct customer contact show that the company remains on course for growth – with a clear vision for the future and proximity to the market.

#### Strategic investments in new locations

Diesel Technic has significantly expanded its international logistics infrastructure in 2025 with two major construction projects. One of the largest construction projects in the company's history was completed in Dubai: storage capacity increased to over 31,000 pallet spaces, supported by state-of-the-art technology. This enables Diesel Technic to improve availability for distribution partners and workshop customers in the Middle East, South Asia and Africa, laying the foundation for further growth and faster market launch.

The company is also making a strong statement in France: Diesel Technic France has already taken over its first new building in Janzé near Rennes and will officially move in at the beginning of 2026. The new location replaces the previous one in Noyal-sur-Vilaine and offers twice as much storage space, automated processes and sustainable technologies. The investment will make the supply of spare parts in France more efficient and create a modern working environment for employees.

#### Three anniversaries – a shared path to success

In 2025, Diesel Technic celebrated three significant anniversaries: 30 years of Diesel Technic (M.E.) FZE in Dubai, 20 years of Diesel Technic Iberia S.L. in Spain and 10 years of Diesel Technic UK & Ireland LTD in Great Britain. Each of these milestones represents the development from a small warehouse operation to an established logistics and distribution expert. All three locations demonstrate that Diesel Technic is committed to sustainable success worldwide through innovation, partnership and a clear vision for the future.

## Digital quality assurance at the highest level

With the continuous development of the Diesel Technic Quality System (DTQS), a lot has happened in recent years: Today, the company is setting new standards in digital quality assurance for DT Spare Parts brand spare parts. The DTQS comprises structured processes from product development to after-sales support and has been significantly expanded through forward-looking measures such as digital process automation, high-tech test benches and a new engineering office in Dubai. DTQS thus stands for technological innovation, global presence and guaranteed reliable product quality worldwide – a clear sign of Diesel Technic's commitment to precision and customer focus.

## Global proximity through trade fair appearances

This technological and infrastructural development was complemented in 2025 by a strong international trade fair presence. Diesel Technic showcased its aftermarket expertise at events such as Motortec Madrid, Road Transport Expo UK, Expo Peças Brazil and Solutrans France. In addition to new products and interactive activities related to the Premium Shop, the new location in France was also presented. The trade fair appearances underline the company's commitment to customer proximity, innovation and international expansion.

## International exchange of Parts Specialists

Another highlight was the international meeting of Parts Specialists at the Diesel Technic headquarters in Kirchdorf, Lower Saxony, Germany. Workshop professionals from all over the world exchanged best practices and new service ideas in order to further improve support for end customers – for example, through the Premium Shop, PS Tips videos or the HelpDesk. Workshops, practical visits and a supporting programme strengthened team spirit and promoted international cooperation.

## Motorsport as a practical laboratory

Diesel Technic is actively involved in truck racing and uses its partnership with Sascha Lenz and SL Trucksport 30 as a practical testing ground.
