DIESEL TECHNIC

Global Automotive Solutions – Made in Germany

Offer of training

Steering pumps

- ① The steering pump is a component that is of safety-relevance to the steering. Within the framework of this product training, we will provide an insight into the correct handling of the steering pumps. Here we will provide helpful practical advice, among other things, to prevent potential faults when installing. Furthermore, we will take a look at the process of the Diesel Technic quality assurance.

Wheel hubs

- ① Wheel hubs are overloaded in daily use. In the day-to-day at the workshop there are a number of opportunities to do things right or wrong. During this training, we will take a look at the extensive product group of wheel hubs and provide you with some helpful advice for practice...

Hydraulic cabin tilt system

- ① It is difficult to carry out the necessary repairs to an engine without a functioning cab tilt system! During this training, we will present some important information to you about obtaining and repairing the cab tilt hydraulics. We will provide an overview of the extensive repair solutions, as well as an insight into our Diesel Technic Quality System (DTQS).

Hydraulic clutch system

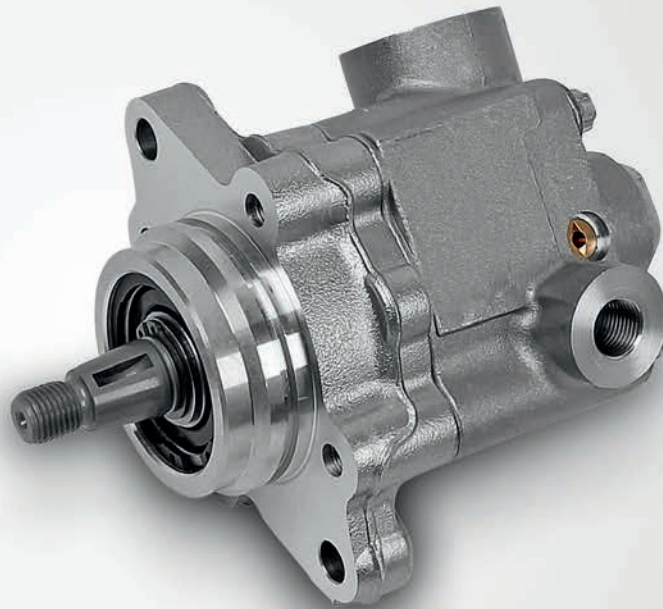

- ① Friction is important for the clutch system and here it is the high force which ensures the secure progress of the vehicle. In this product training, we will provide you with hints and tips regarding the particulars of the hydraulic clutch for a "smooth" workshop routine.

Compressor

- ① It's all about the right pressure! Why, how and where we will show you in our product training about the compressor! Moreover, you will also receive important hints and tips for error prevention and assembly.
